It contains 19 edges and has total weight of 1830. The edges selected are E-D 20, P-T 30, L-K 30, C-N 30, F-D 40, B-C 40, G-E 50, M-P 50, C-D 60, N-L 60, I-J 60, K-M 70, T-Q 90, T-O 100, A-B 120, J-H 140, I-G 160, A-R 200 and J-S 480. The other 11 roads were left out because each would form a cycle.

What it represents:

The MST is the cheapest set of roads that still connects all 20 nodes or locations, with no road wasted. The full network has a total length of 3970, while the MST needs only 1830, a saving of about 54%. This could help in planning which roads to maintain or upgrade first, or the cheapest way to lay power lines or fibre between all locations.
